SPEAKER BADGES
x2

3X40mm
PAN HEAD PHILLIPS
STAINLESS SCREWS
X12

INSTALLATION INSTRUCTIONS: UTVS-CP65

INSTALLATION INSTRUCTIONS Cont. : UTVS-CP65

1. Separate the body from the clamp ring of the Axia Alloys® heavy duty clamp. Loosely install included Axia Alloys® heavy duty clamp ring around the cage with tightening bolt facing down. (Reference Figure 1)
2. Re-secure Axia body to clamp ring.
Keep clamp loose, adjustments may be needed. (Reference Figure 1 & 2)
3. Remove nylon locking nut and steel washer from the end of the Axia® clamp body bolt. **DO NOT** remove the rubber washer, this will compromise the integrity of your pod. Push the Axia® clamp bolt through mounting hole in 6.5" Cage Pod. (Reference Figures 3)
4. Re-apply steel washer and nylon locking nut to mounting bolt inside the pod. Run speaker wire through rubber grommet on the 6.5" pod and prepare speaker wire to mount speaker (Reference Figure 4)
5. Wire and mount 6.5" speaker into pod & tighten clamp to cage to 32 ft-lb. (Reference TORQUE Figure & Figure 5)
6. Feed speaker wire through your cage for a super clean install. If you have a factory cage, there will be a hole to run the wire through (Reference Figure 6). If you have an aftermarket cage, we recommend drilling a 9/64" hole to feed the wire through. A hole drilled close to where the speaker wire comes out of the mounted pod will make running the wire easier.
7. Move to the front of the vehicle and choose a location on the cage to drill the exit hole for the speaker wire to run out of the cage. Choose a location below the dash plastics to hide your wire and bore a 9/64" hole to feed the wire through. (Reference Figure 7).
8. Add the UTV Stereo brushed aluminum decal by peeling off plastic and aligning it on the back of the now mounted 6.5" cage pod. Repeat steps 1-6 for each 6.5" cage pod (Reference Figure 8).
